

# Mobile Warehouse Management System

## Overview

Mobile device technology and advanced software now enable companies to extend their traditional warehouse Management infrastructure to a new frontier where the warehouse management is no longer the old painful process. Mobile warehouse management solutions for the Enterprise can:

- ◆ Increase the stock accountability
- ◆ Shorten the Issue process by at least half
- ◆ Reduce the double data entry to zero
- ◆ Faster Stock Take by using Handheld
- ◆ Shorten the goods receiving

Some PDA in the market

## Who We Are

**Studio Tech** is a Systems Integrator. We are dedicated in delivering quality software which is fine-tuned to our customers' needs.

We also have ready-made range off-the-shelf products which will cater to the different range of industry and operations.

## S-Tech Mobile Warehouse Management System (WMS)

**S-Tech Mobile WMS** is an integrated operational control software, which allows you to do purchasing, receiving, inventory control. From a user end, it allows you to do product ordering, issuing, outlet accountability, and more. It can also be integrated with an interface program to Accounting Solutions, where the **Mobile WMS** can send electronic data to the Accounting System at the end of the day to generate invoice to the customer.

## Features

- **Easy Stock Check and Issue with Mobile Data Collector**

Our Pocket PC device, attached with a Laser Barcode Scanner makes issue of stock and stock take process a child play. The Pocket PC can hold up to 200,000 line items at any time. Data will be downloaded to the PC or Server upon completion of the process which eliminates the painful process of data entry to the system. Elimination of data entry shall dramatically reduce all the data entry errors to zero.

Issue of goods by using Handheld

- **Receiving Document**

**S-Tech Mobile WMS** generates a receiving document with the barcode, which can be easily scanned by the PDA Scanner for easy receiving. At the end of the day, the storekeeper can upload all the receiving from the handheld to the desktop system to update the inventory.

- **Stock Adjustments**

This function allows the user to adjust the stocks manually if there is a loss of goods, breakage, spoilage, or if wrong quantity was keyed in earlier.

- **Updating of Inventory**

The system updates the inventory in real time upon receiving the goods and posts the information on the Stock Card. It also updates the Stock Card upon transferring stocks out from the store.

Receiving Goods using Handheld
